A Touchstone Energy® Cooperative 

Power On: October is National Co-op Month

October, 2020

As an electric cooperative, our top priority is always to provide reliable, affordable energy to you, the consumer-members we serve. Because we are a co-op, our mission is to enrich the lives of our members and serve the long-term interests of our local community—and this mission has never been more critical than in recent months. One of the seven principles that guides *all* co-ops is “concern for community.” This principle is the essential DNA of Central New Mexico Electric Cooperative, and it sets us apart from other electric utilities.

October is National Co-op Month, and electric cooperatives across the country are highlighting the many ways we “Power On.” Keeping this theme in mind, we recognize the essential role we play in serving a special community like ours.

Who would have fathomed in March, that the COVID-19 virus would amount to a test of our community *and* our nation? The changing circumstances due to the pandemic have created both challenges and opportunities. Over the past several months, we’ve all been challenged to operate differently, and CNMEC has stepped up to help our members and strengthen the safety net for our more vulnerable neighbors.

As an essential service, and to ensure reliability of your power supply, we modified our operations to safeguard business continuity. Our line crews and other employees began working on staggered schedules to maintain separation. Some staff worked remotely. In the office, we limited and modified meetings and gatherings to allow for safe separation. We also adjusted our walk-in office availability and in-person service calls to ensure the health and safety of our employees and our valued members. For the health and safety of everyone, we think these measures were the prudent course of action for the times.

For our members impacted by COVID-19 who needed help with their electric bills, we suspended disconnects, waived late fees and worked with those hardest hit to make special payment arrangements. You may have even noticed on your August electric bill a “COVID relief credit,” which was issued to all active metered accounts.

We tell you about all of these efforts not to boast about CNMEC but to explain how much we care about this community, because we live here too.

We’ve seen other local businesses rising to meet similar challenges during this time, because that’s what communities do. While the challenges caused by COVID-19 have been daunting, it’s encouraging to see how everyone is pulling together.

Central New Mexico Electric Cooperative was built by the community to serve the community, and that’s what we’ll continue to do – Power On.

CNMEC

One thing that is certain in uncertain times – **OUR COMMITMENT** to you and the local communities we serve.

4 COMMON CULPRITS OF ELECTRICAL FIRES

Outdated wiring and overloaded circuits are the most common causes of electrical fires. Check the following areas of your home to ensure your home's electrical safety is up to par.

1. Electrical outlets: Faulty electrical outlets are a leading cause of home fires. As outlets age, so do the wires behind them that you can't see. Any loose, damaged or warm-to-the-touch outlets should be repaired or replaced.

2. Electrical wiring: Outdated wiring is another common cause of electrical fires. Frequently tripped breakers, flickering lights and burning smells are clear warning signs. If your home is more than 20 years old, it may not be able to handle today's increased power load. If you suspect your home's wiring is outdated, leave this one to the pros and contact a qualified electrician.

3. Overloaded cords and outlets: Extension cords are not permanent solutions. If your big-screen TV, home theater system and other electronics are plugged into one extension cord, it's time to call an electrician and install additional outlets.

4. Old appliances: Older appliances are more likely to have loose or damaged wiring, which means they're more likely to catch fire. Check older appliances for damage and determine if it's time to upgrade or replace. Also check to ensure you're using appliance-grade outlets. A qualified electrician can help with installation.

Doing Our Part During Uncertain Times

We've seen first hand the economic impact this pandemic has had on our community and we've seen other local businesses rise to meet similar challenges during this time. That's why in August CNMEC gave nearly \$500,000 in COVID-19 relief funds to help the members of our community. CNMEC was built by the community to serve the community, and that's what we'll continue to do. **#POWERON**

Energy Efficiency Tip of the Month

The average household owns 24 electronic products, which account for roughly 12% of home energy use. When shopping for electronics, consider purchasing ENERGY STAR®-certified products, which can be 70% more efficient than conventional models.
